1 Introduction

The *Report Formatting Guide for Reporting Entities* identifies the report fields that reporting entities and their software providers need to use when they submit reports.

Each section of this guide outlines a different report with the following information:

- **Description:** A brief description of the report.
- **Report Naming Convention:** The acceptable name designation for the report.
- **Acceptable Record Types:** The record types used in the report and the intended uses for each of those types.
- **Sample file format:** A screenshot showing a portion of a sample report file.
- **Header Row Format:** A table that shows the format of the report's header row, which must be the first row of the report file. The total records reported in the header row should match the number of records contained in the associated report. For example, if a Regular Payroll report contains five RP20 records and five RP25 records, the total number of records reported in the header row should be 10.
- **Record Type Formats:** Tables describing the format of each record type that is used in the report.

The Header and Record Type tables contain the following information for each data element:

- **Data Element Name:** The common name for the data contained in a specific position on a row. Within a table, the data elements are listed in the order that they must appear on a row.
- **Required?:** Indicates whether a data element must include actual information about an employee or retiree.
 - This column is marked “Yes” when a data element must include actual information about an employee or retiree. Not including actual information for a data element marked as “Yes” will cause a validation error.
 - This column is marked “No” when the data element can be padded with spaces or zeroes without causing a validation error. See the definition for the “Length” column, below, for more information about padding a field that is not required.
 - If the “Yes” or “No” designation for this column is followed by an asterisk (*), then the Definition column for that data element contains an exception to the rule about whether the element is required. In the Definition column, the statement that defines the exception is preceded with an asterisk. For example, the row below shows the Hourly Rate data element. The Required column is marked as “Yes*,” indicating that the actual hourly rate must be reported for an employee, but that the Definition column contains an exception to that rule. Here, the exception is that the Hourly Rate should be padded with zeroes for salaried employee instead of being filled with a dollar amount.

Hourly Rate	Yes*	9	5	141	145	Yes	99999	For hourly employees, their normal hourly rate of pay, entered without the dollar sign (\$), commas, or a decimal point. * For salaried employees, pad with zeroes
-------------	------	---	---	-----	-----	-----	-------	---

- **Alphanumeric (X) or Numeric (9):** Identifies whether the data element is expected to contain alphanumeric or numeric characters.
 - Elements that allow alphanumeric characters are designated with an X. Alphanumeric characters can be upper or lower case letters A-Z and/or the numbers 0-9. If a data element is designated as alphanumeric but allows for special characters, such as hyphens or apostrophes, the acceptable special characters will be listed in the Description column for that element.
 - Elements that allow for only numeric characters are designated with a 9. The characters in that element can only be the numbers 0-9.

- **Length:** The number of positions on a row that are allotted for the data element. Information for each data element should always be entered starting at that element's Beginning Position, as described below.

When the information reported for a data element falls short of the element's Ending Position, the extra length should be padded with spaces or zeroes, depending on whether the field accepts alphanumeric or numeric characters.

- Pad alphanumeric values with spaces to the right of the reported information. For example, if the Length of an element is 10 and the information reported is AAAA, the extra six positions for that element must be spaces: "AAAA ".
- Pad numeric values with zeroes entered to the left of the reported information. For example, if the Length of the element is 10 and the information reported is 1234, the six extra positions must be zeroes: "0000001234"

When a data element is optional, or is required but not applicable to a specific type of reporting entity, pad the field as described above.

- **Beginning Position:** The character position in a row in which information is expected to start. For example, if an element has a beginning position of 5, the entry must start at the fifth character of that row, including spaces.
- **Ending Position:** The position in a row with the last character expected for an element. For example, if an element has an ending position of 10, the entry must end at the tenth character of that row, including spaces.
- **Implied Decimal?:** Indicates whether the reported information includes decimal values. This is typically used to show the number of cents in a dollar amount.
 - This column is marked "No" if the data does not include decimals.
 - This column is marked "Yes" if the data does include decimals. If data includes decimals, **do not** enter the decimal point. Instead, the system will assume that the final two digits of the information reported for this data element are the digits that follow the decimal point. For example, if an element with a Length of 8 requires a

Introduction

dollar amount and the amount to report is \$2345.67, the entry is padded with zeroes to the left of the information and the decimal point is implied, so the value would be 00234567.

- **Format:** A description of the expected format for a data element. For example, the Gender Code data element is designated as alphanumeric, but the only acceptable values that can be reported are “M” for male or “F” for female. The format column for that element specifies that the data reported for that element must be M or F.
- **Description:** A detailed description of the data element.

Header Row Format

The table below describes the format for the header row of an Employee Demographic Report:

ED Header Row Data Element Name	Required?	Alphanumeric (X) or Numeric (9)	Length	Beginning Position	Ending Position	Implied Decimal?	Format	Description
TRS Assigned Reporting Entity (RE) Number	Yes	9	4	1	4	No	9999	The employer's four-digit, TRS-assigned ID number.
Report Period	Yes	9	6	5	10	No	MMYYYY	The month and year of the report, in the MMYYYY format.
Total Number of Detail Records	Yes	9	9	11	19	No	999999999	The number of records included in the report.

Record Type Formats

ED20: The table below describes the format for an ED20 record to report the person, address and contact information for an employee who has not been reported to TRS previously by the RE.

Note: When information is reported for a field, it must be padded to its full length. Left pad numeric fields with 0. Right pad alphanumeric fields with spaces.

Note: For fields that are optional and no information is being reported, or that are required but not applicable to a specific type of reporting entity, pad the field as described above.

Note: If an employee's name consists of only one name, it must be placed in the "Last Name" field and the other name fields must be padded with spaces.

Employee Data Report

ED20 Data Element Name	Required?	Alphanumeric (X) or Numeric (9)	Length	Beginning Position	Ending Position	Implied Decimal?	Format	Description
Record Type Code	Yes	X	4	1	4	No	ED20	Indicates that the information on the row is an ED20 record type.

ZIP4	No	9	4	284	287	No	9999	The +4 portion of the ZIP code for the employee's address. Only applicable for US addresses. Fill with zeroes for foreign addresses.
Province	No	X	20	288	307	No		The province of an employee's address. For foreign addresses only. Fill with spaces for US addresses.
Country	No	X	4	308	311	No		Pad the first position of this field with a space followed by the three-letter ISO 3166-1 alpha-3 code for the employee's country of residence. For foreign addresses only. Fill with spaces for US addresses.
Postal Code	No	X	10	312	321	No		The postal code for an employee's address. For foreign addresses only. Fill with spaces for US addresses.
Work Email Address	No	X	100	322	421	No	name@domain.com	The employee's work email address.
Primary Phone Number	No	9	10	422	431	No	9999999999	The employee's full, 10-digit phone primary number, including the three-digit area code plus the seven-digit phone number entered without parentheses or hyphens.

ED25: The table below describes the format for an ED25 record that is used to report adjustments to an employee's demographic information.

Note: When information is reported for a field, it must be padded to its full length. Left pad numeric fields with 0. Right pad alphanumeric fields with spaces.

Note: For fields that are optional and no information is being reported, or that are required but not applicable to a specific type of reporting entity, pad the field as described above.

Note: For an ED25 record, all “Original” fields must be populated and only the “New” fields that are being changed should be completed. Leave “New” fields blank when previously reported data is still correct, If deleting the contents of a field, pad the “New” field with ‘X’s for its entire length. Deleting the entire field applies to the First Name, Middle Name, and Generation fields only.

TRS is not updating addresses through ED25 records. Addresses must be updated by the member through either MyTRS or with a form TRS358 mailed to TRS.

ED40: The table below describes the format for an ED40 record that is used to report new employment and position records.

This record provides contract and position information on each employee prior to the start of employment and prior to the submittal of regular payroll records for the first time.

Additionally, this record is to be submitted as follows:

- (1) In July for employees who have contracts or work agreements that begin in July;
- (2) In August for employees who have contracts or work agreements that begin in August;
- (3) In September for employees who have standard (September through August) contracts or work agreements,
- (4) During the year when new employees are added to payroll. An ED20 record should also be sent in the same month, AND
- (5) Any time a person begins a new position, including summer school.

If a person performs multiple jobs, they should have multiple ED40 records submitted. However, if multiple jobs fall within the same position code (01, 02, 03, 04, 05, 06, 07, 09), only one record may be submitted per position code. In that instance, the ED40 record should include information on the employee's primary position.

If a person is substituting for your entity, and that person substitutes in multiple position codes, submit only one ED40 for their primary position code.

The position codes are as follows:

- **Professional/Administrative (01)** – (Examples: Chancellor, Dean, President, Superintendent, Principal, Attorney, Accountant, Director, Administrator, etc.)
- **Teacher, Full-Time Librarian (02)**
- **Support Staff-Other (03)** – (Examples: Aide, Clerk, Security, Maintenance, Groundskeeper, Secretary, Computer Operator, etc.)
- **Bus Driver (04)**
- **Full-Time Nurse/Counselor (05)**
- **Peace Officer (06)**
- **Support Staff-Food Service Worker (07)**
- **Summer School (09) (ISDs and charter schools only)**

Note: When information is reported for a field, it must be padded to its full length. Left pad numeric fields with 0. Right pad alphanumeric fields with spaces.

For fields that are optional and no information is being reported, or that are required but not applicable to a specific type of reporting entity, pad the field as described above.

Employee Data Report

ED45: The table below describes the format for an ED45 record that is used to report employment and position adjustment records. ED45 records should be submitted in the month the change occurs.

The ED45 record is used to:

1. **Edit** a previously submitted and TRS-accepted ED40 record. If the position code, dates, or any other information were wrong on the original ED40, submit an ED45 with an Adjustment Reason Code of “E” (Edit) and put the corrected information in the applicable “New” fields. The ED45 must have the **exact same Beginning Date of Contract/Work Agreement for the same FY as the originally accepted contract**. The original contract is voided and is replaced by the information on the new ED45.
2. **End** a previously submitted and TRS-accepted ED40 record. There are two instances when a reporting entity may need to end an existing ED40 record.
 - i. If an employee changes from one position to another, the original contract/work agreement will have ended earlier than the original end date due to the change. To report this change, submit an ED45 to end the original contract by updating the New Ending Date of Contract/Work Agreement and reporting an Adjustment Reason Code of “N” (End). This ends the original ED40 Contract and Position record. Then submit a new ED40 to start the new contract and position with a begin date right after the end date on the old contract.
 - ii. If an employee has multiple ED40 records because each job is in a different position code and the employee terminates from one of the positions, then an ED45 record with an updated Ending Date of Contract/Work Agreement will need to be submitted for the terminated position. An Adjustment Reason Code of “N” (End) will also be used.
3. **Delete** a previously submitted and TRS-accepted ED40 record. If a reporting entity submitted an ED40 record for an employee in error or for an employee who resigned before performing any duties, then an ED45 may be submitted with an Adjustment Reason Code of “D” (Delete).
4. **End/Add** a previously submitted and TRS-accepted ED40 record. This allows the ED45 to both end an existing contract/position record and start a new contract/position going forward. Unlike an Edit, the End/Add functionality does not replace the original contract/work agreement as it remains on the system. The original contract/work agreement is given a new ending date of the day prior to the beginning date of the new contract/work agreement and another contract/work agreement is added to the system using the new information on the ED45. Instead of submitting an ED45 to end the old position and then submitting an ED40 to start the new position, an ED45 with an Adjustment Reason Code of “A” (End/Date) can be reported to reflect a change in position. **All “New” fields need to be reported if the Adjustment Reason Code is “A” even if the previously reported data will be the same for the new position.**

Note: When information is reported for a field, it must be padded to its full length. Left pad numeric fields with 0. Right pad alphanumeric fields with spaces.

For fields that are optional and no information is being reported, or that are required but not applicable to a specific type of reporting entity, pad the field as described above.

Note: At least one of the "New" fields, as well as all previously reported "Original" fields, must be completed for an ED45 record. Leave "New" fields blank when previously reported data is still correct. If the Adjustment Reason Code is "A", then all "New" fields must be reported even if the previously reported data will be the same for the new position.

ED90: The table below describes the format for an ED90 record that is used to report employment termination records.

This record is used to report an employee who no longer has a contract/work agreement with the reporting entity for one of the following reasons:

- Employment is terminated by the employee or the reporting entity
- Member is retiring from TRS
- Employee died while employed

The ED90 record is submitted the same month that the final transaction for the employee is reported on the Regular Payroll Report. For employees who have ever been reported in TRS-eligible positions by the employer, the final transaction may either be the final eligible salary and deposits OR an adjustment to eligible salary and deposits previously reported. For employees who have always been employed in positions ineligible for TRS, the final transaction is not required.

The ED90 record and the final transaction reported through the Regular Payroll Report must be submitted before TRS can process a refund, death claim, or retirement for a member. If the final transaction month was incorrectly reported on the ED90, submit a new ED90 to replace the original reported month.

Note: When information is reported for a field, it must be padded to its full length. Left pad numeric fields with 0. Right pad alphanumeric fields with spaces.

For fields that are optional and no information is being reported, or that are required but not applicable to a specific type of reporting entity, pad the field as described above.

3 Regular Payroll Report for Independent School Districts, Charter Schools and Education Service Centers

Description: The Regular Payroll Report for Independent School Districts is used to report the compensation and contribution details, as well as compensation and contribution adjustments, for the employees of an independent school district, charter school, or Education Service Center. Retirees should NOT be included on the RP report.

Dollar amounts should match the Reporting Entity’s Payroll System/Register. The Payroll System/Register contains employee data and the total compensation summary for the pay period.

The contents of the report can be as follows:

- If only reporting new compensation and contribution records, this report should include a header row and an RP20 record for each included employee.
- If reporting new compensation and contribution records for some employees **and** adjustments to previously reported compensation and contributions for other employees, the report should contain the header row, an RP20 record for each employee for whom new information is being reported, and an RP25 record for each employee for whom an adjustment is being reported.
- If only reporting adjustments to previously reported compensation and contribution information, the report should contain a header row and an RP25 record for each employee for whom an adjustment is being reported.

Report Naming Convention: The report file can be named using any convention that makes sense to the reporting entity. For future reference, however, it is suggested that a report name contains the report type, the entity's TRS-Assigned Reporting Entity Number, and the month and year of the reporting period.

Acceptable Record Types:

Record Type	Purpose
Header Row	Used to present summary information about the records contained in the report. The total number of records reported in the header row must be equal to the total number of RP20 and RP25 records.
RP20	Used to report an employee's compensation and contribution information.
RP25	Used to report adjustments to an employee's previously reported compensation and contribution information.

Sample File Format:

When reporting information for an employee using any of these record types, each record must be on its own row. Rows are separated by a carriage return, line feed (<CR> <LF>). If a report contains multiple records for the same employee, those records must appear in the following order: RP20, RP25.

Note that only the first 120 positions of a given row are shown in the screenshot below.

Record Type Formats

RP20: The table below describes the format for an RP20 record that is used to report an employee's compensation and contribution information for the reporting period. If a person performs multiple jobs, there should be multiple RP20 records submitted, one per each separate position code. However, if multiple jobs fall within the same position code, only one RP20 record may be submitted per position code.

When reporting employees who are **NOT** in TRS-eligible positions, the **only** compensation field that should be reported is “Total Gross Compensation” and **no** contribution fields should be reported. The only exception is that employees in non-eligible positions may purchase Special Service through payroll deduction. Therefore, service credit purchase deduction may be reported for these employees. In addition, the “Hours Worked/Scheduled” fields must be reported for **ALL** employees except Substitutes and “Days Worked” fields must be reported for **ALL** employees.

When reporting hours, report either Hours Worked or Hours Scheduled. Do not report both fields. Choose one method per employee and report that method consistently for the fiscal year. Pad the unreported field with zeroes.

Note: When information is reported for a field, it must be padded to its full length. Left pad numeric fields with 0. Right pad alphanumeric fields with spaces.

For fields that are optional and no information is being reported, or that are required but not applicable to a specific type of reporting entity, pad the field as described above.

RP25: The table below describes the format for an RP25 record that is used to report adjustments to an employee's compensation and contribution information for a reporting period. Adjustments can be used to correct an incorrectly submitted Regular Payroll Detail Record, or to add a detail record omitted from a previous report. **This is a net difference transaction.**

Note: When information is reported for a field, it must be padded to its full length. Left pad numeric fields with 0. Right pad alphanumeric fields with spaces.

For fields that are optional and no information is being reported, or that are required but not applicable to a specific type of reporting entity, pad the field as described above.

Note: At least one of the "Adjustment" fields must be completed for an RP25 record. If a report only contains adjustment records, any fields in the header row that are not associated with those adjustments should be padded with zeroes for numeric fields and spaces for alphanumeric fields.

4 Regular Payroll Report for Higher Education

Description: The Regular Payroll Report for Higher Education is used to report the compensation and contribution details, as well as adjustments to compensation and contribution details, for the employees of Higher Education reporting entities. Retirees should NOT be included on the ED report.

Dollar amounts should match the Payroll System/Register. The Payroll System/Register contains employee data and the total compensation summary for the pay period.

This report is submitted as a text file (.txt) that contains a header row and a row for each included record. The contents of the report can be as follows:

- If only reporting new compensation and contribution records, this report should include a header row and an RP20 record for each included employee.
- If reporting new compensation and contribution records for some employees **and** adjustments to previously reported compensation and contributions for other employees, the report should contain the header row, an RP20 record for each employee for whom new information is being reported, and an RP25 record for each employee for whom an adjustment is being reported.
- If only reporting adjustments to previously reported compensation and contribution information, the report should contain a header row and an RP25 record for each employee for whom an adjustment is being reported.

Report Naming Convention: The report file can be named using any convention that makes sense to the reporting entity. For future reference, however, it is suggested that a report name contains the report type, the entity's TRS-Assigned Reporting Entity Number, and the month and year of the reporting period.

Acceptable Record Types:

Record Type	Purpose
Header Row	Used to present summary information about the records contained in the report. The total number of records reported in the header row must be equal to the total number of RP20 and RP25 records.
RP20	Used to report an employee's compensation and contribution information.
RP25	Used to report adjustments to an employee's previously reported compensation and contribution information.

Record Type Formats:

RP20: The table below describes the format for an RP20 record that is used to report an employee's compensation and contribution information for the reporting period. If a person performs multiple jobs, there should be multiple RP20 records submitted, one per each separate position code. However, if multiple jobs fall within the same position code, only one RP20 record may be submitted per position code.

When reporting employees who are **NOT** in TRS-eligible positions, the **only** compensation field that should be reported is “Total Gross Compensation” and **no** contribution fields should be reported. The only exception is that employees in non-eligible positions may purchase Special Service through payroll deduction. Therefore, service credit purchase deduction may be reported for these employees. In addition, the “Hours Worked/Scheduled” fields must be reported for **ALL** employees except Substitutes. The “Days Worked” field must be reported for **ALL** employees.

When reporting hours, report either Hours Worked or Hours Scheduled. Do not report both fields. Choose one method per employee and report that method consistently for the fiscal year. Pad the unreported field with zeroes.

Note: When information is reported for a field, it must be padded to its full length. Left pad numeric fields with 0. Right pad alphanumeric fields with spaces.

For fields that are optional and no information is being reported, or that are required but not applicable to a specific type of reporting entity, pad the field as described above.

5 Regular Payroll Report for TRS

Description: The Regular Payroll Report for TRS is used to report the compensation and contribution details, as well as adjustments to compensation and contribution details, for TRS employees that are not retired under TRS. It is submitted as a text file (.txt) that contains a header row and a row for each included record. Retirees should NOT be included on the RP report.

TRS retirees, whether hired by a third party or by TRS itself, should not be included on the Regular Payroll Report. TRS retirees should be reported on the Employment after Retirement (ER) Report.

Dollar amounts should match the Payroll System/Register. The Payroll System/Register contains employee data and the total compensation summary for the pay period.

The contents of the report can be as follows:

- If only reporting new compensation and contribution records, this report should include a header row and an RP20 record for each included employee.
- If reporting new compensation and contribution records for some employees **and** adjustments to previously reported compensation and contributions for other employees, the report should contain the header row, an RP20 record for each employee for whom new information is being reported, and an RP25 record for each employee for whom an adjustment is being reported.
- If only reporting adjustments to previously reported compensation and contribution information, the report should contain a header row and an RP25 record for each employee for whom an adjustment is being reported.

Report Naming Convention: The report file can be named using any convention that makes sense to the reporting entity. For future reference, however, it is suggested that a report name contains the report type, the entity's TRS-Assigned Reporting Entity Number, and the month and year of the reporting period.

Acceptable Record Types:

Record Type	Purpose
Header Row	Used to present summary information about the records contained in the report. The total number of records reported in the header row must be equal to the total number of RP20 and RP25 records.
RP20	Used to report an employee's compensation and contribution information.
RP25	Used to report adjustments to an employee's previously reported compensation and contribution information.

Sample File Format:

When reporting information for an employee using any of these record types, each record must be on its own row. Rows are separated by a carriage return, line feed (<CR> <LF>). If a report contains multiple records for the same employee, those records must appear in the following order: RP20, RP25.

Note that only the first 120 positions of a given row are shown in the screenshot below.

Total Service Credit Purchase Deductions Adjustment	Yes*	9	11	97	107	Yes	99999999999	The net difference between the amount originally reported and the correct amount of service credit purchase deductions for all reported employees, entered without the dollar sign (\$), commas, or a decimal point. * Positive values only; negative adjustments are not allowed for service credit purchase.

Record Type Formats:

RP20: The table below describes the format for an RP20 record that is used to report an employee's compensation and contribution information for the reporting period. If a person performs multiple jobs, there should be multiple RP20 records submitted, one per each separate position code. However, if multiple jobs fall within the same position code, only one RP20 record may be submitted per position code.

When reporting employees who are **NOT** in TRS-eligible positions, the **only** compensation field that should be reported is "Total Gross Compensation" and **no** contribution fields should be reported. The only exception is that employees in non-eligible positions may purchase Special Service through payroll deduction. Therefore, service credit purchase deduction may be reported for these employees. In addition, the "Hours Worked/Scheduled" and "Days Worked" fields must be reported for **ALL** employees.

When reporting hours, report either Hours Worked or Hours Scheduled. Do not report both fields. Choose one method per employee and report that method consistently for the fiscal year. Pad the unreported field with zeroes.

Note: When information is reported for a field, it must be padded to its full length. Left pad numeric fields with 0. Right pad alphanumeric fields with spaces.

For fields that are optional and no information is being reported, or that are required but not applicable to a specific type of reporting entity, pad the field as described above.

RP20 Data Element Name	Required?	Alphanumeric (X) or Numeric (9)	Length	Beginning Position	Ending Position	Implied Decimal?	Format	Description
Record Type Code	Yes	X	4	1	4	No	RP20	Indicates that the information on the row is an RP20 record type.
Employee Identification Number	Yes	X	9	5	13	No	SSN Format: 999999999 OR TRS Temporary ID format: XX9999999	The employee's Social Security Number or TRS temporary ID. Do not use an employer-issued ID number. If the employee's SSN is not available, contact TRS to obtain a TRS temporary ID to use in its place.
Date of Birth	Yes	9	8	14	21	No	MMDDYYYY	The employee's date of birth in the MMDDYYYY format.
Gender Code	Yes	X	1	22	22	No	M or F	The employee's gender, either M or F. (M = Male and F = Female)
Last Name	Yes	X	30	23	52	No		The employee's last name as it appears on their Social Security Card. A person who has only one name must have that name reported in the Last Name field. Hyphens, apostrophes, and spaces are acceptable.

RP25: The table below describes the format for an RP25 record that is used to report adjustments to an employee's compensation and contribution information for a reporting period. Adjustments can be used to correct an incorrectly submitted Regular Payroll Detail Record, or to add a detail record omitted from a previous report. **This is a net difference transaction.**

Note: When information is reported for a field, it must be padded to its full length. Left pad numeric fields with 0. Right pad alphanumeric fields with spaces.

For fields that are optional and no information is being reported, or that are required but not applicable to a specific type of reporting entity, pad the field as described above.

Note: At least one of the "Adjustment" fields must be completed for an RP25 record. If a report only contains adjustment records, any fields in the header row that are not associated with those adjustments should be padded with zeroes for numeric fields and spaces for alphanumeric fields.

6 Employment after Retirement Report

Description: The Employment after Retirement Report is used to report the employment information, as well as adjustments to the employment information of retirees, regardless of retirement date or retirement type. It is submitted as a text file (.txt) that contains a header row and a row for each included record.

Dollar amounts should match the Payroll System/Register. The Payroll System/Register contains employee data and the total compensation summary for the pay period.

The contents of the report can be as follows:

- If only reporting new retiree employment records, this report should include a header row and an ER20 record for each included retiree.
- If reporting new retiree employment records for some retirees **and** adjustments to previously reported retiree employment information for other retirees, the report should contain the header row, an ER20 record for each retiree for whom new information is being reported, an ER25 record for each adjustment that adds a record to a previously submitted employment after retirement report, and an ER27 record for each adjustment that modifies or deletes a record on a previously submitted employment after retirement report
- If only reporting adjustments to that add records to, delete records from, or modify previously reported retiree employment information, the report should contain a header row and an ER25, or ER27 record for each retiree for whom an adjustment is being reported, depending on the nature of the adjustment.

Report Naming Convention: The report file can be named using any convention that makes sense to the reporting entity. For future reference, however, it is suggested that a report name contains the report type, the entity's TRS-Assigned Reporting Entity Number, and the month and year of the reporting period.

Acceptable Record Types:

Employment after Retirement Report

Record Type Formats:

ER20: The table below describes the format for an ER20 record type that is used to report employment information for all service and disability retirees, regardless of their retirement date. If a retiree performs multiple jobs, there would only be **one** ER20 record submitted for each retiree. The “Hours Worked”, “Days Worked,” and “Total Gross Compensation” fields should be cumulative, regardless of how many positions the retiree works for the Reporting Entity.

Note: When information is reported for a field, it must be padded to its full length. Left pad numeric fields with 0. Right pad alphanumeric fields with spaces.

For fields that are optional and no information is being reported, or that are required but not applicable to a specific type of reporting entity, pad the field as described above.

ER20 Data Element Name	Required?	Alphanumeric (X) or Numeric (9)	Length	Beginning Position	Ending Position	Implied Decimal?	Format	Description
Record Type Code	Yes	X	4	1	4	No	ER20	Indicates that the information on the row is an ER20 record type.

ER27: The table below describes the format for an ER27 record type that is used to report an adjustment for a posted record on a previously reported Employment after Retirement report.

The ER27 is used to either:

1. Edit a previously submitted and TRS-accepted ER20 or ER25 record. If adjusting one or more of the following fields, a net difference transaction needs to be reported:
 - a. Hours Worked Adjustment
 - b. Days Worked Adjustment
 - c. Total Gross Compensation Adjustment
 - d. Pension Surcharge Adjustment
 - e. TRS-Care Surcharge Adjustment

2. Delete a previously submitted and TRS-accepted ER20 or ER25 record. When deleting a record that was previously reported in error, all of the following data must net to zero:
 - a. Hours Worked Adjustment
 - b. Days Worked Adjustment
 - c. Total Gross Compensation Adjustment
 - d. Pension Surcharge Adjustment
 - e. TRS-Care Surcharge Adjustment

The correct adjustment reason code must be used to either edit or delete a previously posted record.

Note: When information is reported for a field, it must be padded to its full length. Left pad numeric fields with 0. Right pad alphanumeric fields with spaces.

For fields that are optional and no information is being reported, or that are required but not applicable to a specific type of reporting entity, pad the field as described above.

Note: For an ER27 record, all “Original” fields must be populated. Populate only those “New” fields or “Adjustment” fields that are being changed.
