

TRS Offers A+ Prescription Drug Coverage

Prescription drugs treat illnesses, improve chronic conditions, relieve pain, and even save lives. That's why prescription drug coverage is an essential part of health benefits and why it's important to understand what your prescription plan covers.

We are committed to providing robust drug coverage that meets the needs of the Texas public education community.

Some health plans may appear to be lower-cost, but may not include critical coverage, such as specialty drugs, burdening employees with most of the cost for these medications.

You never know when you might need this coverage. If you don't have it, you could be on the hook for high costs. Specialty drugs are increasingly prescribed for a wider range of conditions, such as cancer, immune disorders, migraines, asthma, and more.

Access to pharmacies is also an important part of your health plan and this is why TRS contracts with CVS Caremark to provide A-plus pharmacy coverage.

Unlike smaller vendors, CVS Caremark gives our participants convenient access to discounted pricing and pharmacies around the country, including local independent pharmacies.

Whether it's generic, brand-name or specialty drugs, TRS health plans have you covered.
